

IP-COM Hotel WLAN Solution

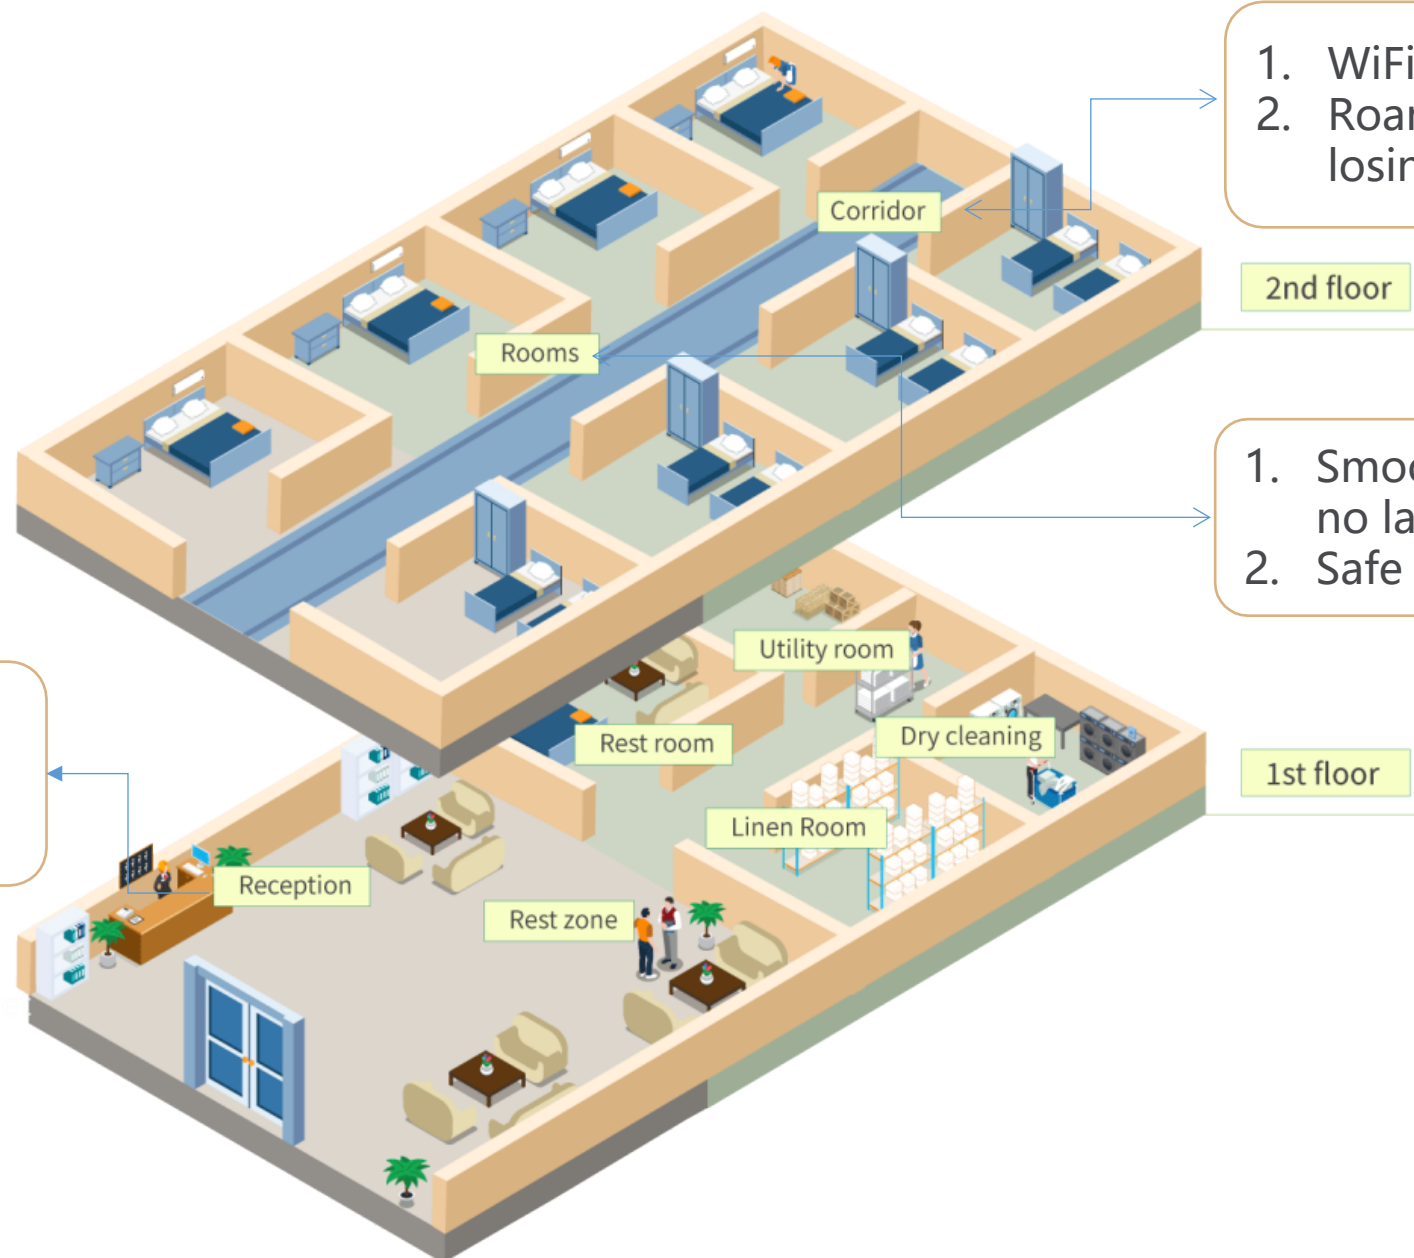

——Hotel

1. Requirements
2. Solutions
3. Benefits
4. Recommendations

1. WLAN requirements of hotel scenarios

Hotel

1. WiFi coverage every corner
2. Roaming in hotels without losing connection

1. Smooth internet access with no latency.
2. Safe network access

1. Online checking and booking service
2. Low failure rate and easy maintenance

1. Requirements Summary

1 Good signal, large coverage without dead zone

2 Good WiFi experience

3 Good internet security

4 Simple maintenance and Low failure rate

1. Requirements
2. **Solutions**
3. Benefits
4. Recommendations

2. Solution——Public areas

Reception/corridor/public area AP deployment: Deploy a **dual-band ceiling AP** every **15-20** meters

The reception desk, corridors and other indoor public areas of the hotel mainly use wireless to achieve the effect of auxiliary coverage of the network. These areas do not have too high requirements for wireless Internet access experience, so use a ceiling-mounted AP with a relatively large coverage. This can ensure full coverage of the hotel's internal wireless network.

Scene: large area and few terminal devices.

Large coverage

High-power and high-gain omnidirectional antenna design, single AP coverage up to 500 m².

Ceiling AP

Good roaming

It supports fast roaming protocols 802.11K, V, and R, and terminal devices can make smooth wireless switching.

High speed

WiFi 6 standard, 3000 Mbps rate, WiFi access to high-speed network without latency.

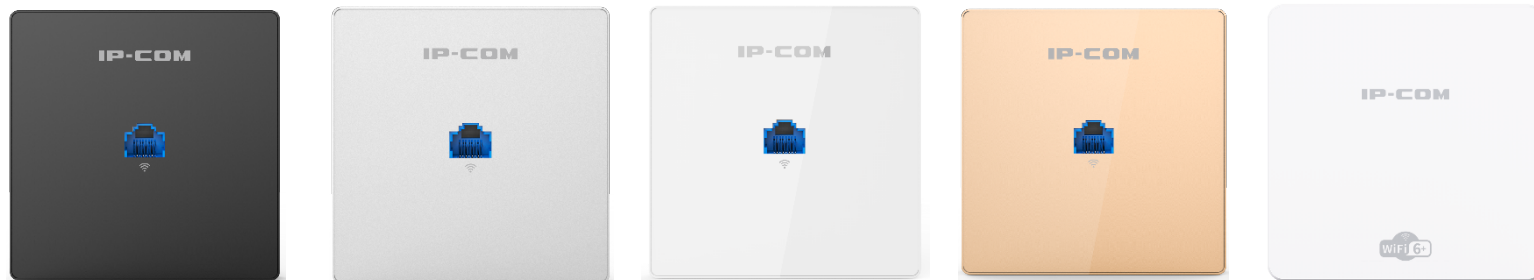

2. Solution——Hotel room

Hotel room AP deployment: deploy a gigabit dual-band in-wall AP in each room

The hotel rooms are small in size and less connected terminal devices. One in-wall AP is deployed in each room, which not only meets the coverage requirements of a single room, but also improves the WiFi access experience in the room.

Scene: small area and few terminal devices.

In-wall

Elegant
appearance

Stylish design with a wide range of colours to suit all decoration styles.

Easy installation

Supports PoE power supply and only requires one Ethernet cable.

High speed

3000Mbps wireless rate without wall penetration

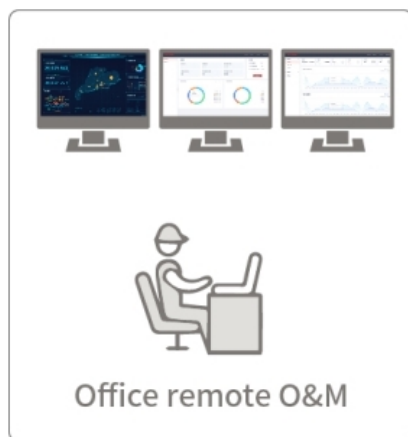

2. Solution——General Design

Hotel

2. Solution——Network topology

Hotel

1. Requirements
2. Solutions
3. **Benefits**
4. Recommendations

3. Benefits——Large WiFi coverage

High power and high gain
Better Penetration
Coverage without dead spots

Dual band symmetrical PCB
independent antenna
Higher antenna gain than traditional APs
better signal
larger coverage

**Dual band symmetrical
antennas**

3. Benefits——Good wireless network experience

Seamless roaming

smooth switching

Load balancing

Fit high-density environment

Automatic channel optimisation

Automatically reduce
inter-AP interference

3. Benefits——Easy to use, effortless project experience

Only need a phone

- Automatic pre-sales solution generation and online consultation ;
- Gateway, switch, AP managed by APP
APP One-key Network configuration;
- Engineering acceptance tests, e.g. signal, network speed;
- Automatic report generation

Rapid negotiation, no struggle for solutions

Rapid deployment, simple operation and maintenance

Rapid acceptance, no delays in project delivery
